Provider Treatment Report — Concurrent Review

Harborview Behavior Therapy
Submitted to Carelon Behavioral Health

1. Member Identifying Information

Member ID (internal)	HB-2024-0207
Age	8 years
Diagnosis	F84.0 Autism Spectrum Disorder
Report period	07/01/2025 – 12/31/2025
Treating BCBA	Marcus Ellery, MS, BCBA

2. Changes Since Last Assessment or Treatment Report

Since the previous report the member changed schools in September and now attends a general-education classroom with a shared aide. His family relocated, so home-based sessions moved from a weekday evening to a weekend morning. No changes to medication.

3. Summary of Program History

Services began in 2022. Early programming focused on functional communication, compliance and self-care. Current programming centers on conversation skills, peer interaction and independence in school routines.

4. Progress by Goal

Goal	Baseline	Current	Criterion	Status
Initiate a conversation with a peer	0 per day	3 per day	5 per day, 3 sessions	In progress
Complete morning routine independently	40%	85%	90%, 5 days	In progress
Request a break appropriately	20%	92%	90%, 3 sessions	Met
Reduce task refusal	5.0 per hour	1.1 per hour	Below 1.0 per hour	In progress

Data is reported per goal as collected. Graphs for each goal are attached to the original submission.

5. Assessment Results

The ABLLS-R was re-administered in November. The member now scores 71% of items in the Social Interaction domain, up from 54%. A Vineland-3 update is scheduled for the next period.

6. Coordination of Care

The BCBA met with the school team twice and with the member's speech-language pathologist monthly. Goals were aligned to avoid overlap, and a shared communication log is used with the classroom aide.

7. Parent and Caregiver Training

Caregivers completed 10 training sessions focused on prompting at homework time and on reinforcing independent morning routines. Both parents now run the routine with 85% fidelity.

8. Transition and Discharge Plan

The team is moving toward a school-based consultation model. Criteria for reducing hours include task refusal below 1.0 per hour for eight consecutive weeks and independent morning routine at 90% for four weeks.

9. Recommended Services

Service	Code	Current / week	Requested / week
Direct treatment	97153	20 hours	16 hours
Supervision	97155	3 hours	2.5 hours
Caregiver training	97156	1 hour	1 hour

Hours are requested at a lower level than the current period because of the member's progress and his increased time in the classroom.
